or **Register new account**

Customer Connection
Increase Value of your Productive Solution

Customer Connection

Standard Focus Topics

Customer Connection is a simple process directed at incrementally enhancing and improving the products and solutions our customers are using today. It offers SAP customers the opportunity to suggest small enhancements to products and solutions in mainstream maintenance, providing a fast and non-disruptive delivery via SAP notes and Support Packages. Customer Connection is structured along Focus Topics, which are suggested by SAP or the participating user groups.
More about CC

Customer Engagement Initiative
Influence Future Innovations

Customer Engagement Initiative

Influence Future Innovations

Customer Engagement Initiative (CEI) enables close end-to-end collaboration between customers and SAP teams during the full development cycle for planned products and solutions, new releases or enhancement packages. CEI offers an opportunity for customers to influence SAP development in collaboration with their peers. This helps SAP create products and solutions that meet our customers' needs, reflect best business practices and realize process and technology innovations.

More about CEI

CO-INNOVATE THE FUTURE WITH SAP

Idea Place facilitates co-innovation with SAP, customers, partners, universities and students through innovation campaigns based on new technologies, solutions and markets.

Influence SAP

Gathering input and galvanizing influence, this unparalleled program connects members with SAP professionals in a collaborative effort to guide the future.
Sharing effective ideas and productive points-of-view to shape future SAP solutions – now, that is Influence. By leveraging the collective voice and experience of ASUG members, the Influence program impacts every stage of the SAP development cycle.

Why participate? Get the inside track on roadmaps, connect with experts, and maximize your return on your SAP investment:

- ASUG Executive Exchange – A community of leaders from large and small enterprises in a range of industries. Participation helps members leverage SAP for business results.

- Influence Councils– Member-led task forces make the business case for change. Activities range from roadmap validation, building use-case scenarios, and defining the next round of product enhancements.

- SAP Customer Engagement Initiative (CEI) – SAP-led focus groups give SAP insight into business challenges and help define and shape the functionality of future solutions.

- Early-adoption opportunities – Find out more about SAP Ramp-Up (SAP standard process for introducing new solutions) or SAP Customer Validation (access to solutions prior to SAP Ramp-Up)

- SAP Customer Connection – ASUG members work together to define and prioritize smaller improvement requests which can be rolled out via SAP Notes. Step in to Customer Connection by searching for useful improvements and applying the related notes in your productive systems on www.sapimprovementfinder.com.
